

Mayflower Models - 400 Years on From Her Historical Voyage

In the autumn of 1620, a group of English and Dutch puritans, believing that the Church had strayed too far from Christ's teachings, set out to establish a colony in the New World where they could practice their religion free from persecution. With 102 pilgrims and around 30 crew on board, *Mayflower* departed Plymouth for what is now New England on a voyage that would last two months in treacherous conditions. This journey has become an iconic chapter in American history, and our models pay tribute to the ship which remains a popular historic symbol today. They are budget-priced and offer an all-wood construction with canvas sails.

14156 Mayflower, small, 33x33cm.

7538 Mayflower, 20cm.

SS Great Britain

Designed by Victorian engineering genius Isambard Kingdom Brunel, and launched in July 1843, *SS Great Britain* was by far the largest and most advanced passenger ship of her day, offering a sail and steam-powered transatlantic crossing in only 14 days. In 1970, she was returned to the Bristol dry dock where she was built 127 years earlier, and remains there today as a museum ship welcoming 150,000-200,000 visitors annually.
